AMENDMENT &

RESPONSE TO OFFICE ACTION

Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the

application:

<u>Listing of Claims:</u>

1. (Original) A microchip device array for the controlled release or exposure of reservoir

contents comprising:

two or more microchip device elements, each of which includes a plurality of

reservoirs which contain molecules for controlled release or components for selective exposure;

and

a means for flexibly connecting said device elements, so as to form a flexible

array which can conform to a curved surface.

2. (Original) The microchip device array of claim 1, wherein the means for flexibly

connecting comprises a flexible supporting layer attached to a surface of the device elements.

3. (Original) The microchip device array of claim 2, wherein the flexible supporting layer

comprises a polymer.

4. (Original) The microchip device array of claim 3, wherein the polymer is selected from

the group consisting of polyimides, polyesters, parylenes, and hydrogels.

5. (Original) The microchip device array of claim 1, wherein the flexible supporting layer

is porous or permeable to molecules releasable from the reservoirs or provided with one or more

apertures through said flexible supporting layer.

6. (Original) The microchip device array of claim 1, wherein the means for flexibly

connecting comprises one or more hinges or flexible tethers connecting two or more of the

device elements.

AMENDMENT &

RESPONSE TO OFFICE ACTION

7. (Original) The microchip device array of claim 1 for implantation onto or into a patient,

wherein the array can conform to the curvature of a tissue surface.

8. (Original) The microchip device array of claim 7 for implantation into or onto the eye of

the patient, wherein the tissue surface comprises ophthalmic tissue.

9. (Original) The microchip device array of claim 7, wherein the tissue surface is selected

from the group consisting of the stratum corneum, mucosal membranes, blood vessels, bone,

brain, and bladder.

10. (Previously Presented) The microchip device array of claim 1, wherein the microchip

device elements further comprise a plurality of discrete reservoir caps over the molecules in the

reservoirs, wherein each reservoir cap controls release of the molecules from one of the

reservoirs.

11. (Original) The microchip device array of claim 1 further comprising a means for

wirelessly communicating with the microchip device elements.

12. (Original) The microchip device array of claim 11, wherein the communicating means

comprises a photocell to receive incident light energy.

13. (Original) The microchip device array of claim 1 further comprising an energy storage

means.

14. (Original) The microchip device array of claim 13, wherein the energy storage means

comprises a capacitor, a battery, or both.

15. (Original) The microchip device array of claim 1 further comprising electrical

connections between two or more of the microchip device elements, such that the microchip

device elements can be powered or controlled by a common energy source or control source,

respectively.

AMENDMENT &

RESPONSE TO OFFICE ACTION

16. (Original) The microchip device array of claim 1, wherein the reservoirs contain drug

molecules.

17. (Original) The microchip device array of claim 1, wherein the reservoirs contains one or

more secondary devices for exposure.

18. (Original) The microchip device array of claim 17, wherein the secondary device

comprises a sensor.

19. (Original) The microchip device array of claim 18, wherein the sensor is a pressure

sensor or a chemical sensor.

20. (Original) The microchip device array of claim 1, wherein the microchip device elements

comprise reservoirs which contain drug molecules and at least one reservoir which contains a

sensor.

21. (Original) The microchip device array of claim 1, wherein the reservoirs contain

molecules selected from the group consisting of diagnostic reagents, catalysts, combinatorial

chemistry precursors, and fragrance molecules.

22. (Original) The microchip device array of claim 1, wherein the electrical traces are built

into the means for flexibly connecting said device elements.

23. (Original) The microchip device array of claim 1, which comprises flexible, passive

release device elements.

24. (Original) The microchip device array of claim 7, which enhances the patency of a tissue

lumen or other organ structure in the patient.

25-40. (Canceled).
